

Elevator Weekly Reflection #2: Arnav Krishnan

Since the last reflection Sarp completed many of the Elevator states (some are still not done though), as well as a few methods in the Elevator and CallManager classes. I have finished the Passengers package, as well as most of ElevatorSimController (which is mainly stepSim), as well as a basic GUI. I haven't implemented the GUI we designed yet, instead opting for a very simple colored-block representation of the elevator. Once the GUI is properly updating and communicating with ElevatorSimController, which is a goal that I have for the coming week, I plan to implement the rest of the GUI.

Other specific goals I have for our team is to finish a basic GUI, finish the elevator states, and go over JUnit tests. On the topic of JUnit tests, we are passing the first 2: testBasicCheckPassengers(BuildingFSMBasicTest) and testBasicCheckResetID (BuildingFSMBasicTest).

Right now I don't have any concerns, I feel like we are working well together and progress, while maybe not too fast, is steady.
