

Elevator Weekly Reflection #3: Arnav Krishnan

Since the last reflection, Sarp and I have finished a basic GUI, and made a lot of progress in Building, CallManager, and Elevator. However, we are still experiencing persistent timing issues, with very little progress made towards resolving those. In the next few days, we hope to resolve those issues and be passing 100% of the tests. I feel like this is achievable, as we are close, passing many of the sub-tests within each case. However, if need be, I believe that we can also rewrite much of the Elevator, CallManager, and Building classes, given that we may have some more fundamental issues. A concern I have is the amount of time we have before the final to resolve these issues, but I don't doubt our ability to finish by the due date.
